

General Description of Status

Since October 10th, when the project plan was completed, work has carried on according to plan. The project is nearing the end of the prototyping phase and the actuators, sensors and camera systems are up and running and what remains of the prototyping phase is to interconnect those systems.

Resource Status

The resource status is good. The actual resources spent were less than planned at the time of writing. The EVM graph can be seen in Appendix A.

Problems / Action Plan

No problems have been identified at the moment of writing.

Risks / Action Plan

The risk management is mostly being carried out as expected. Risks 1, 2 and 4 are expected to become more prominent within the coming weeks when the different subsystems are being interconnected. At the time of writing proactive measures are in effect for these risks. Proactive measure for Risk 3 is in effect and team members are sticking to their independent fields. The documentation tool for Risk 5 has not yet been integrated into the project.

Project Changes From the Project Plan

No official documents have been removed or changed at the time of writing. A resource plan has been added. Official documents now consist of the project plan with appendices, the risk analysis and the newly added resource plan. There have been no changes to the organizational structure of the project.
